

# Contingency planning

Failure to plan, is planning to fail

**aggreko**

# Every business is vulnerable

## What will you do in an Emergency?

Every business is vulnerable to experiencing a serious incident that can prevent it from continuing normal operations. This could be a flood, fire or power failure, but if you've never taken time to consider what might happen in an emergency and how you will deal with it, then you could be heading for trouble. Don't wait for a real life situation to find out what to do in an emergency.

## Power is critical for recovery

**Aggreko is the Global leader in temporary power and temperature control solutions.**

We can help you prepare and plan for circumstances that may impact on your power generation or temperature control systems, so your business can recover with minimal downtime and disruption.

# Contingency planning is vital

## Working with you to identify potential issues

With a wealth of experience in contingency planning, our Engineers will work with you to help identify the potential issues, undertake a comprehensive survey of your site's power and temperature control requirements, provide the appropriate equipment solution, placement, transportation plans and agree the vital back-up that is needed.

## Extensive fleet of equipment

With an extensive fleet of power, cooling and heating solutions, you can also reserve equipment so that it is on constant standby just for your company.

## One call implements your plan

In the event of an emergency, all you need to do is make one call to Aggreko and your temporary power or temperature control contingency plan will be implemented immediately.

## Rapid response

Behind the Aggreko name is a 24/7 dedicated team of co-ordinators at our National Rental Centre in Staffordshire, who will co-ordinate the agreed plan. Local service centres spread across the UK ensure a rapid response with equipment on site within just a few hours. Our own technical Service Engineers with unrivalled experience and expertise can attend site to oversee the set up of equipment, if required or as agreed.

Mains to generator change over panel.
